### > SYSTEM FEATURES

FlowTec™ motor system: Cools and cleans motor for better performance and longer life

Loose debris can damage motor components. Dust buildup insulates the motor, trapping heat inside and shortening life. SportsArt's proprietary FlowTec™ system keeps our treadmill motors clean and cool for longer life and better performance.

First in the line of defense is the FlowTec™ filter. The filter traps dust and debris before it can enter the motor compartment. Dirt and debris from running shoes and environmental contaminants are filtered out and the motor runs cleaner and cooler. FlowTec™ motors are also equipped with a heat sink and turbine fan. This combination of components keeps the motor at optimum operating temperature.

The innovative FlowTec™ motor system results in longer motor life, less maintenance and better treadmill performance.

FlowTec™ can be found on T620, T630, T652, T670e and T680e treadmills by SportsArt Fitness.
